stackoverflow is your friend

use tags!

The screenshot shows the Stack Overflow homepage with a search bar containing the query "suppress legend [ggplot2]". A red arrow points from the text "use tags!" at the top right towards the search bar. Below the search bar, the results summary "21 results" is visible, along with sorting options: relevance, newest, votes, and active.

ggplot2 is an actively maintained open-source chart-drawing library for R, written by Hadley Wickham, based upon the principles of "Grammar of Graphics". It partially replaces R's basic plot and the lattice package, while providing a clean, powerful, orthogonal and fun API.

“A picture is worth a thousand words”

Always, always, always plot the data.

Replace (or complement) ‘typical’ tables of data or statistical results with figures that are more compelling and accessible.

Whenever possible, generate figures that overlay / juxtapose observed data and analytical results, e.g. the ‘fit’.

base or traditional graphics

VS

lattice package

ships with R, but must load
`library(lattice)`

VS

ggplot2 package

must be installed and loaded

```
install.packages("ggplot2", dependencies = TRUE)  
library(ggplot2)
```

Two main goals for statistical graphics

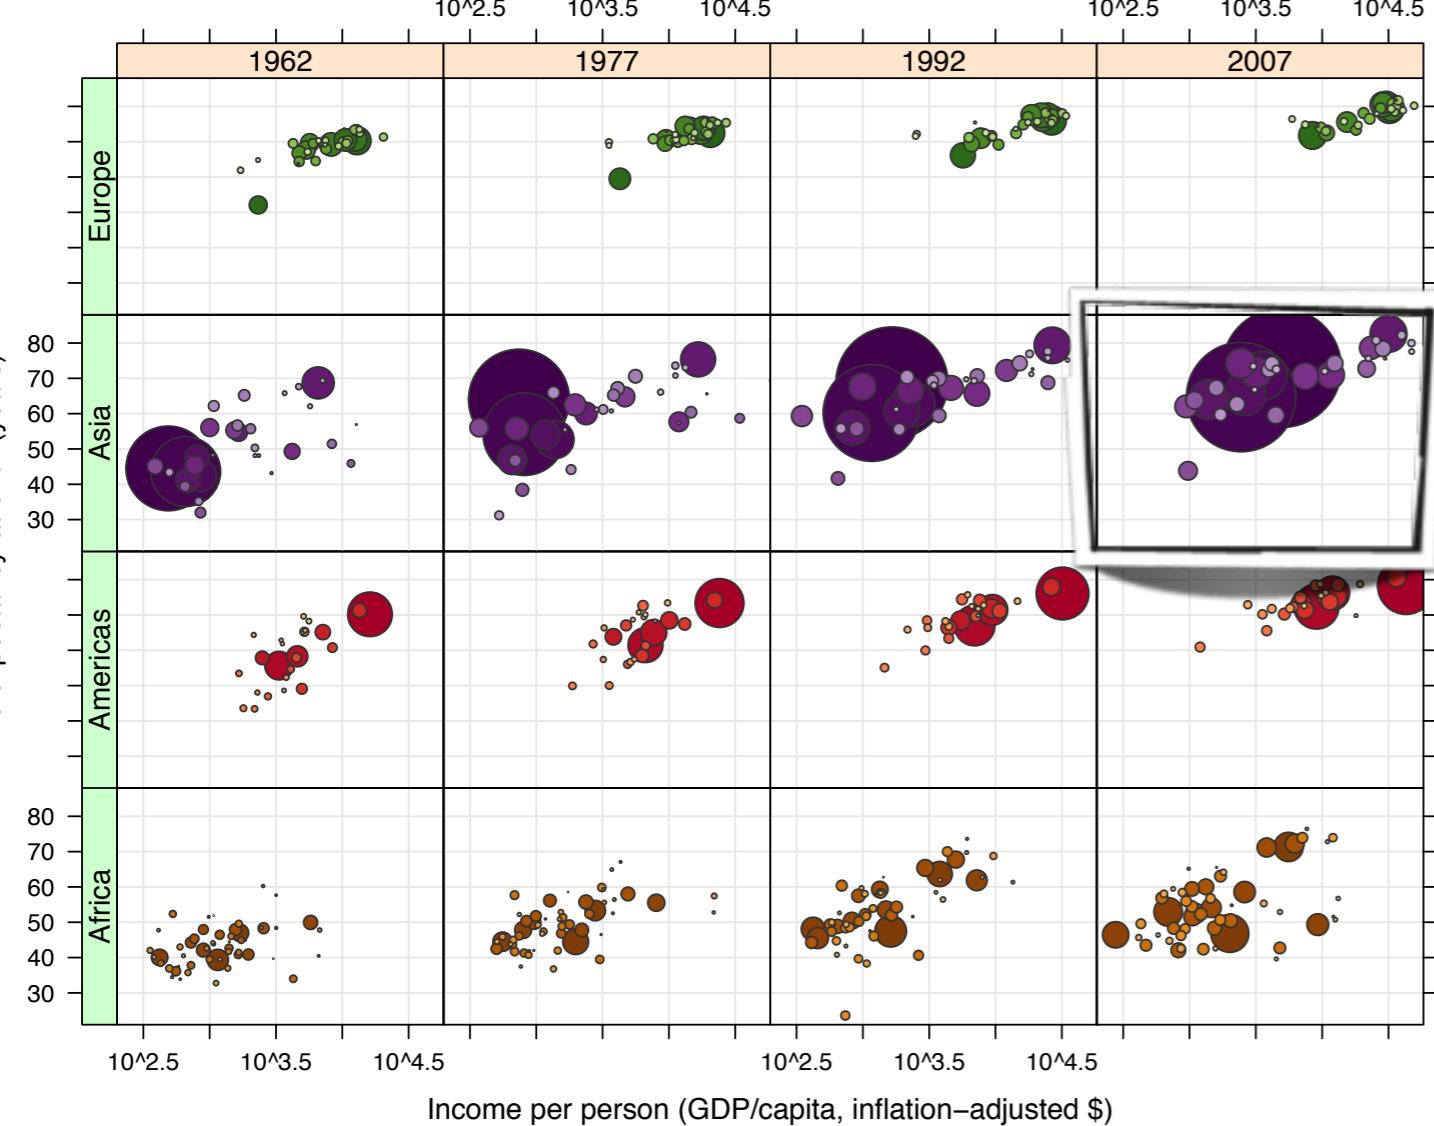

- To facilitate comparisons.
- To identify trends.

lattice and ggplot2 achieve these goals with less fuss

lattice

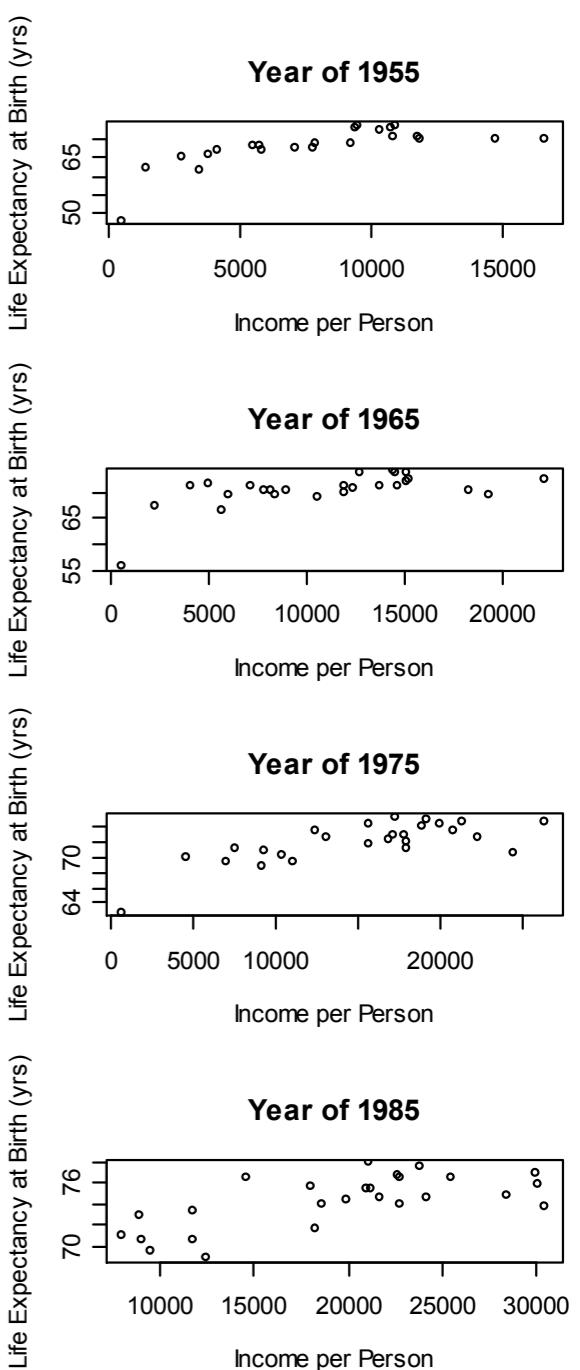

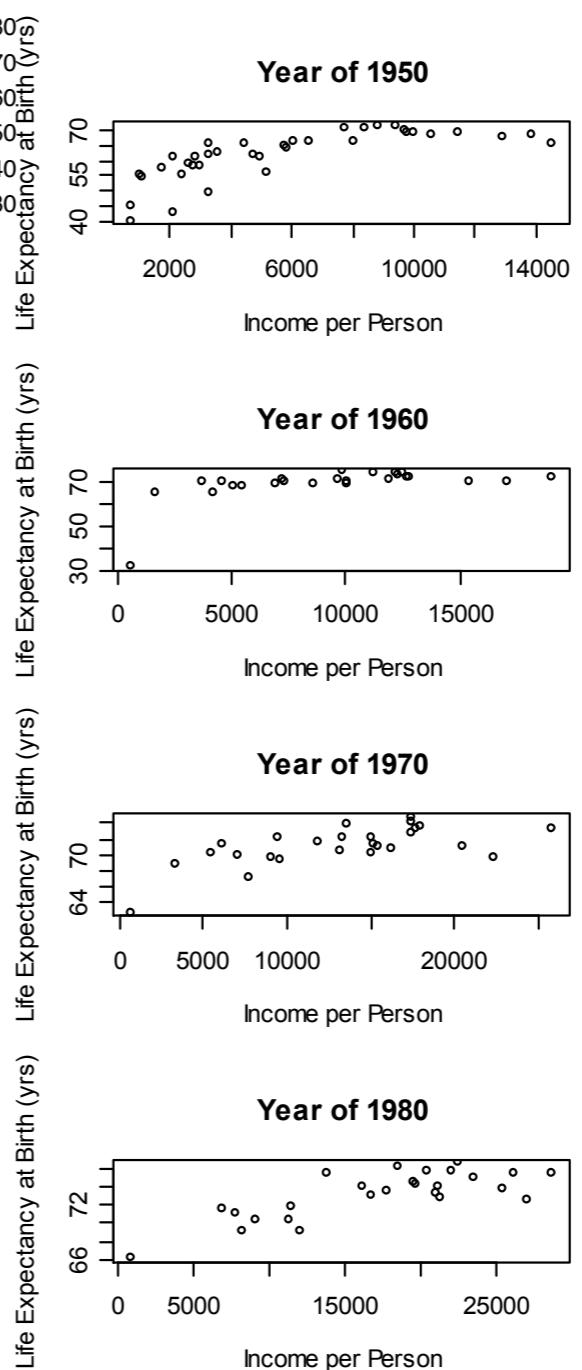

“multi-panel conditioning”

lifeExp ~ gdpPerCap | continent * year

base

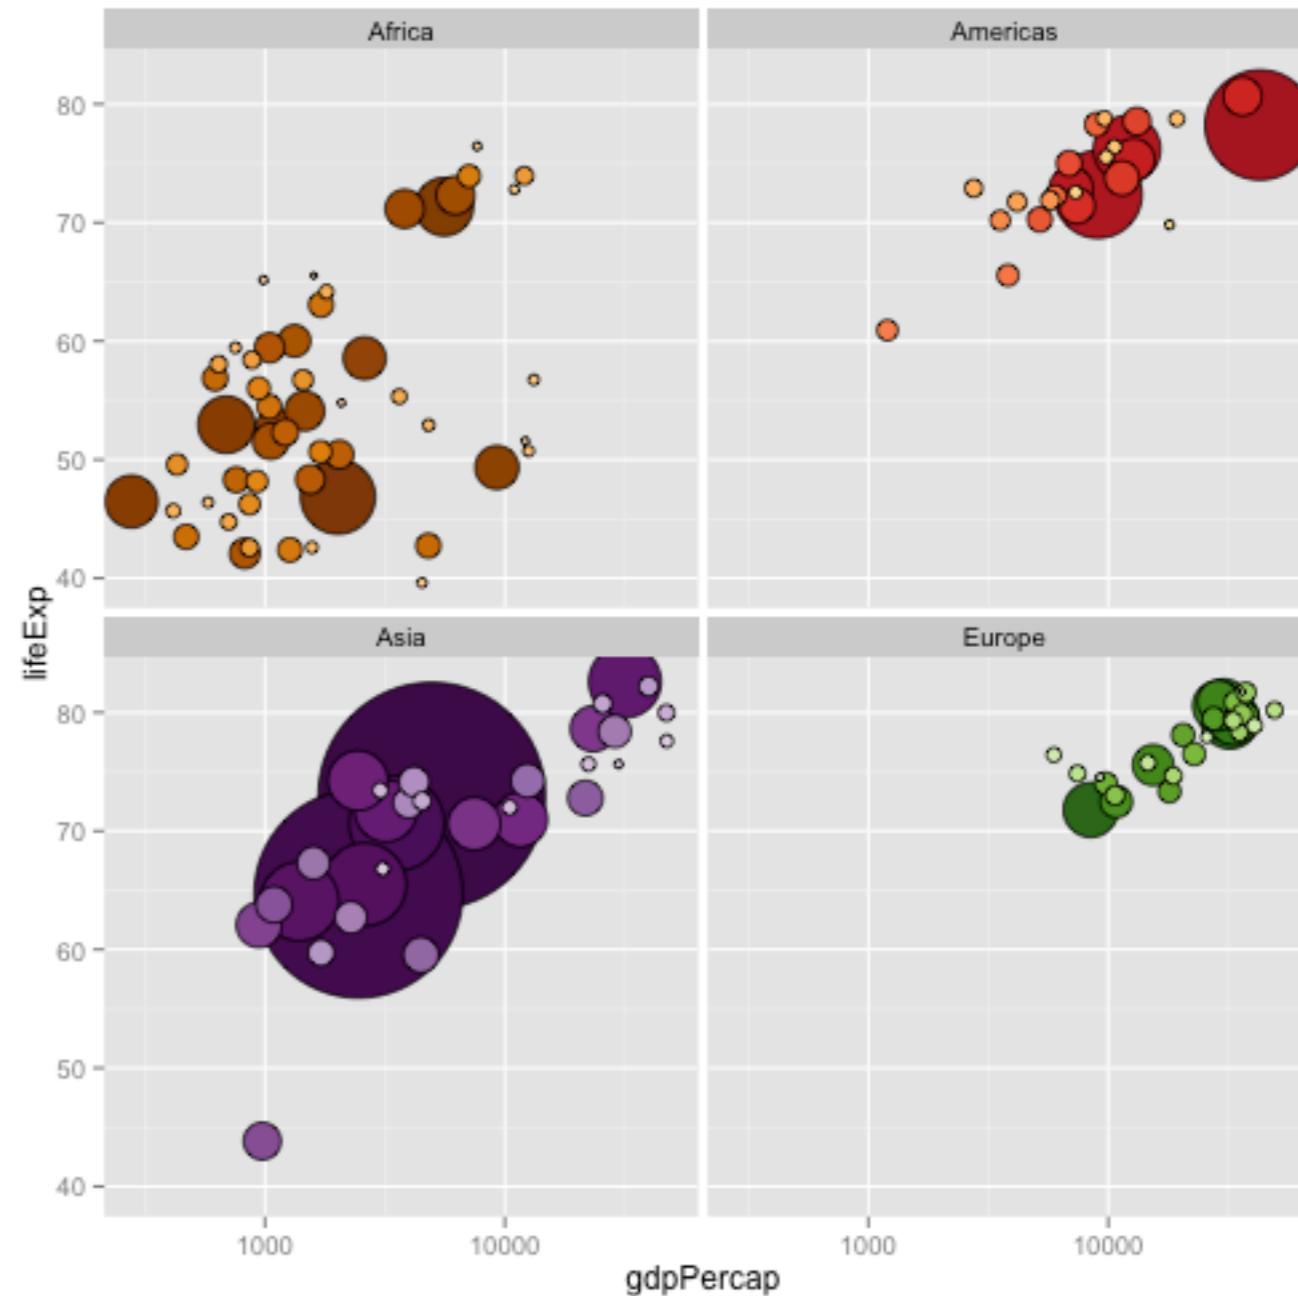

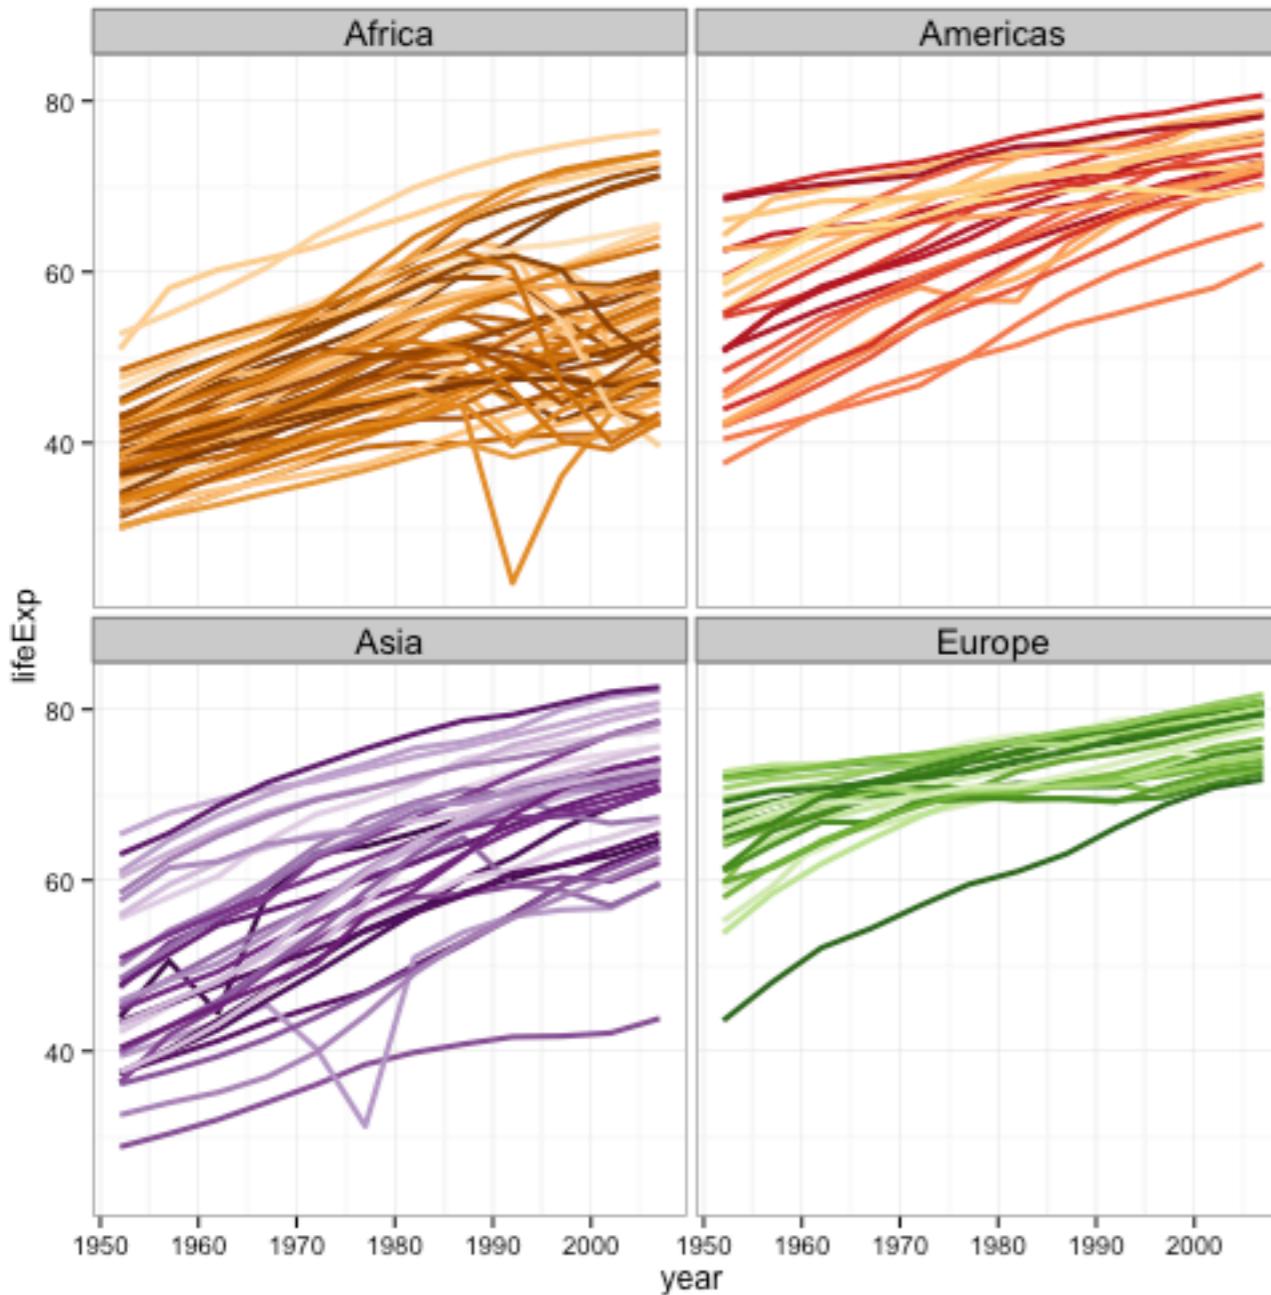

Assignment 1: Best Set of Graphs

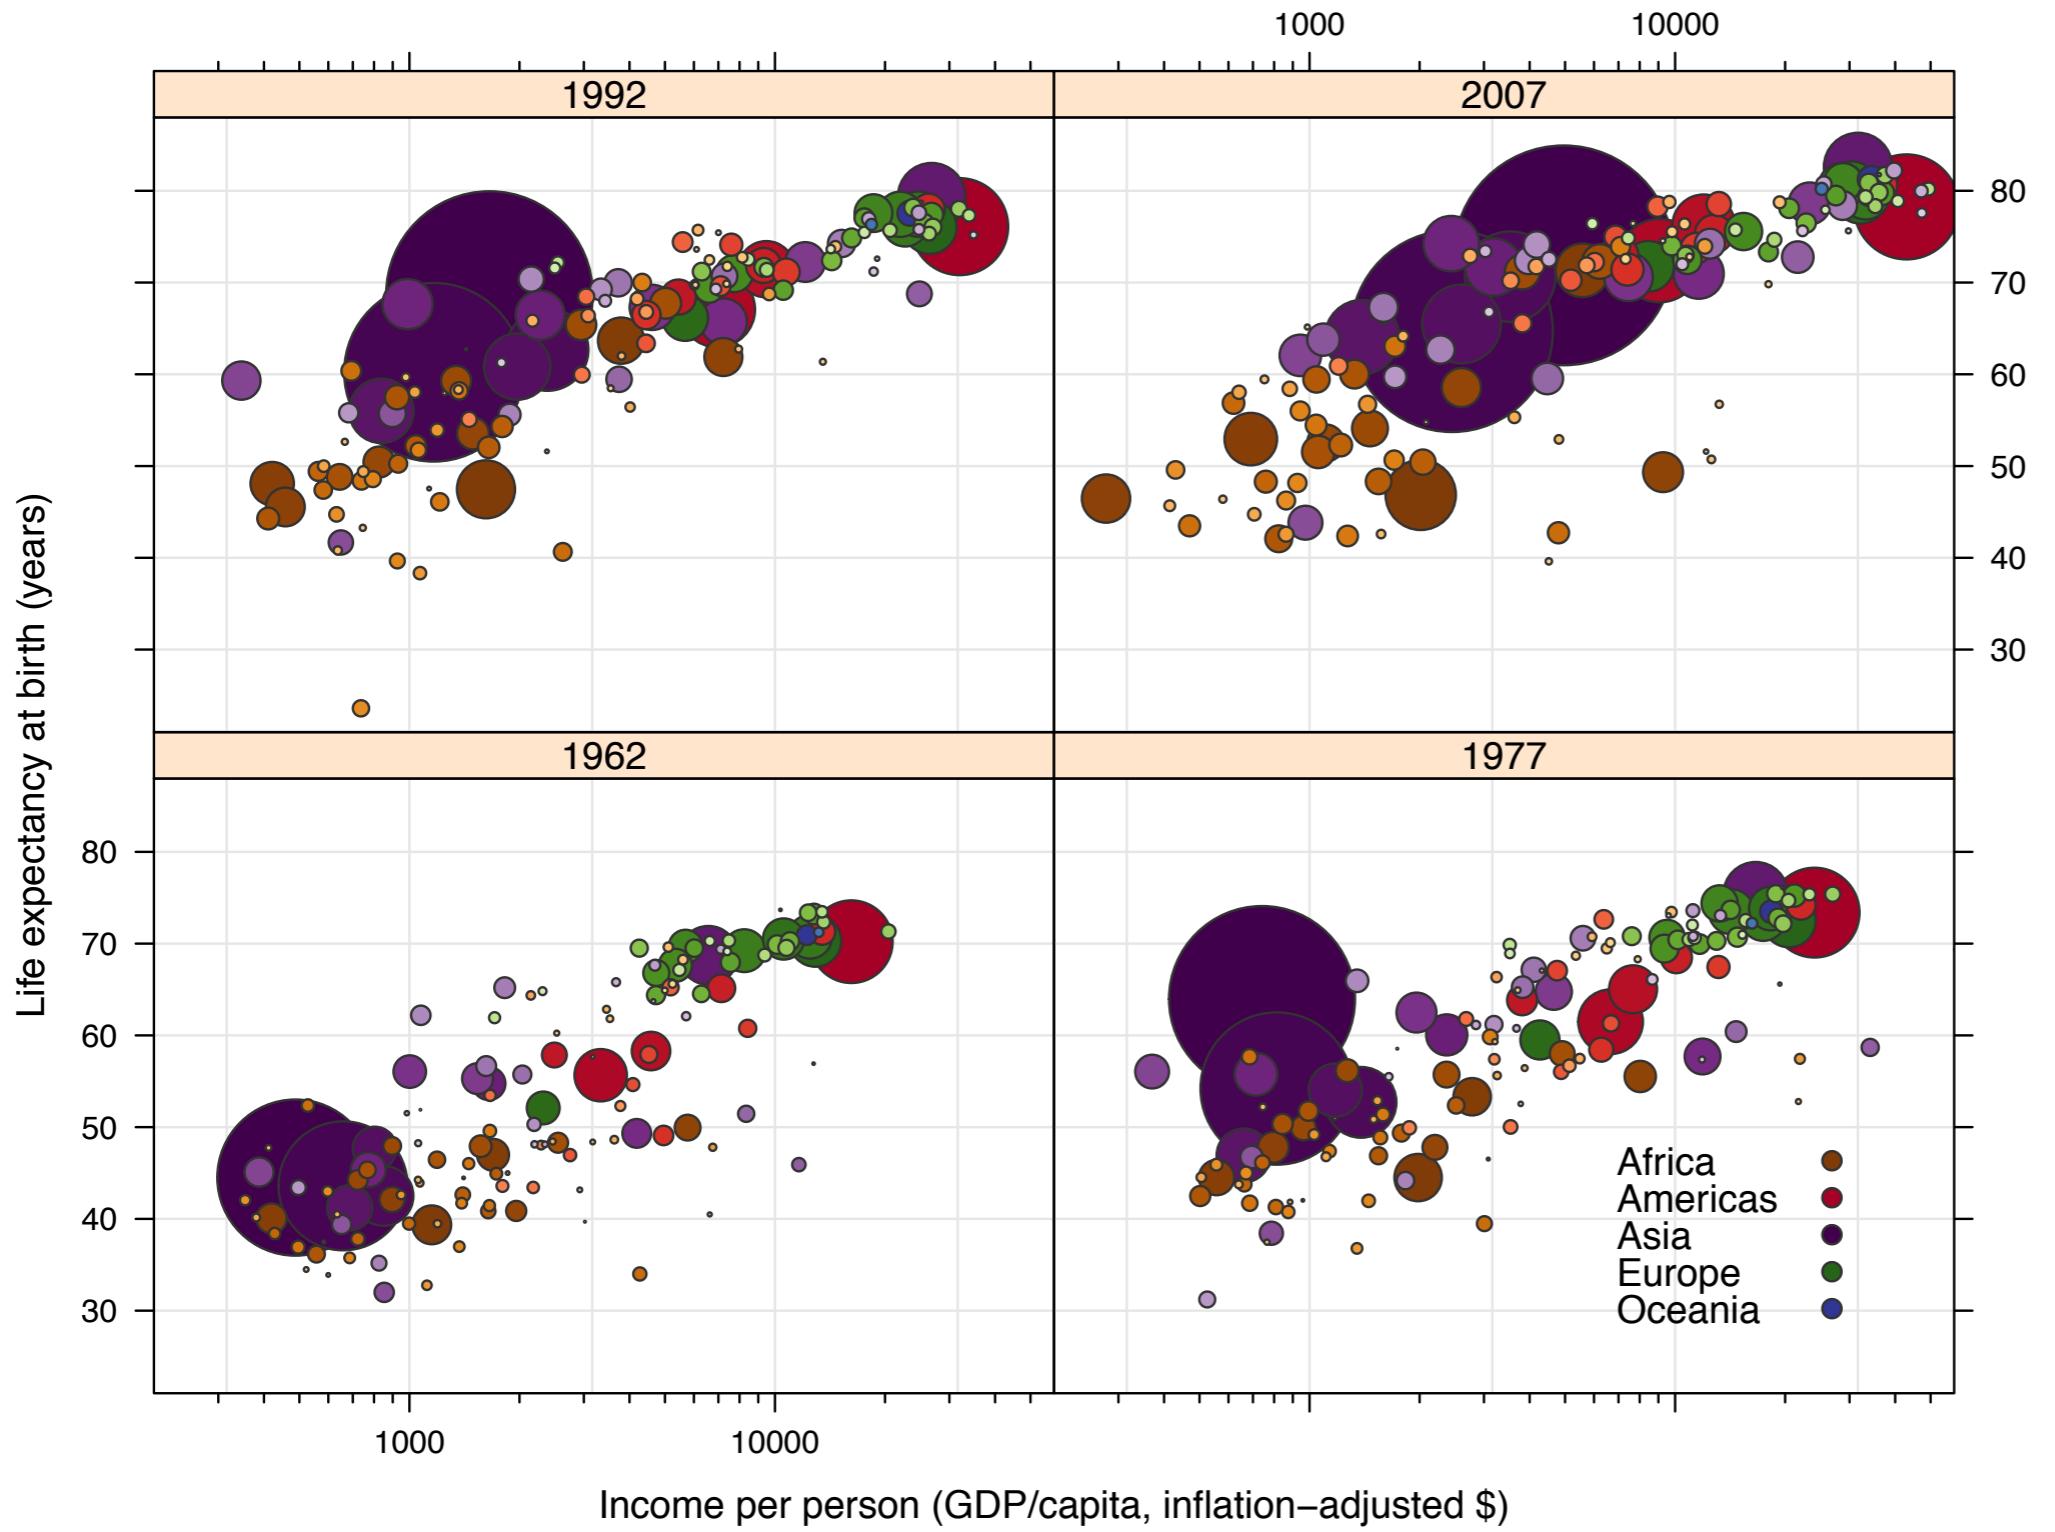

ggplot2

“facetting”

```
ggplot(...) + ... +  
  facet_wrap(~ continent)
```

lattice

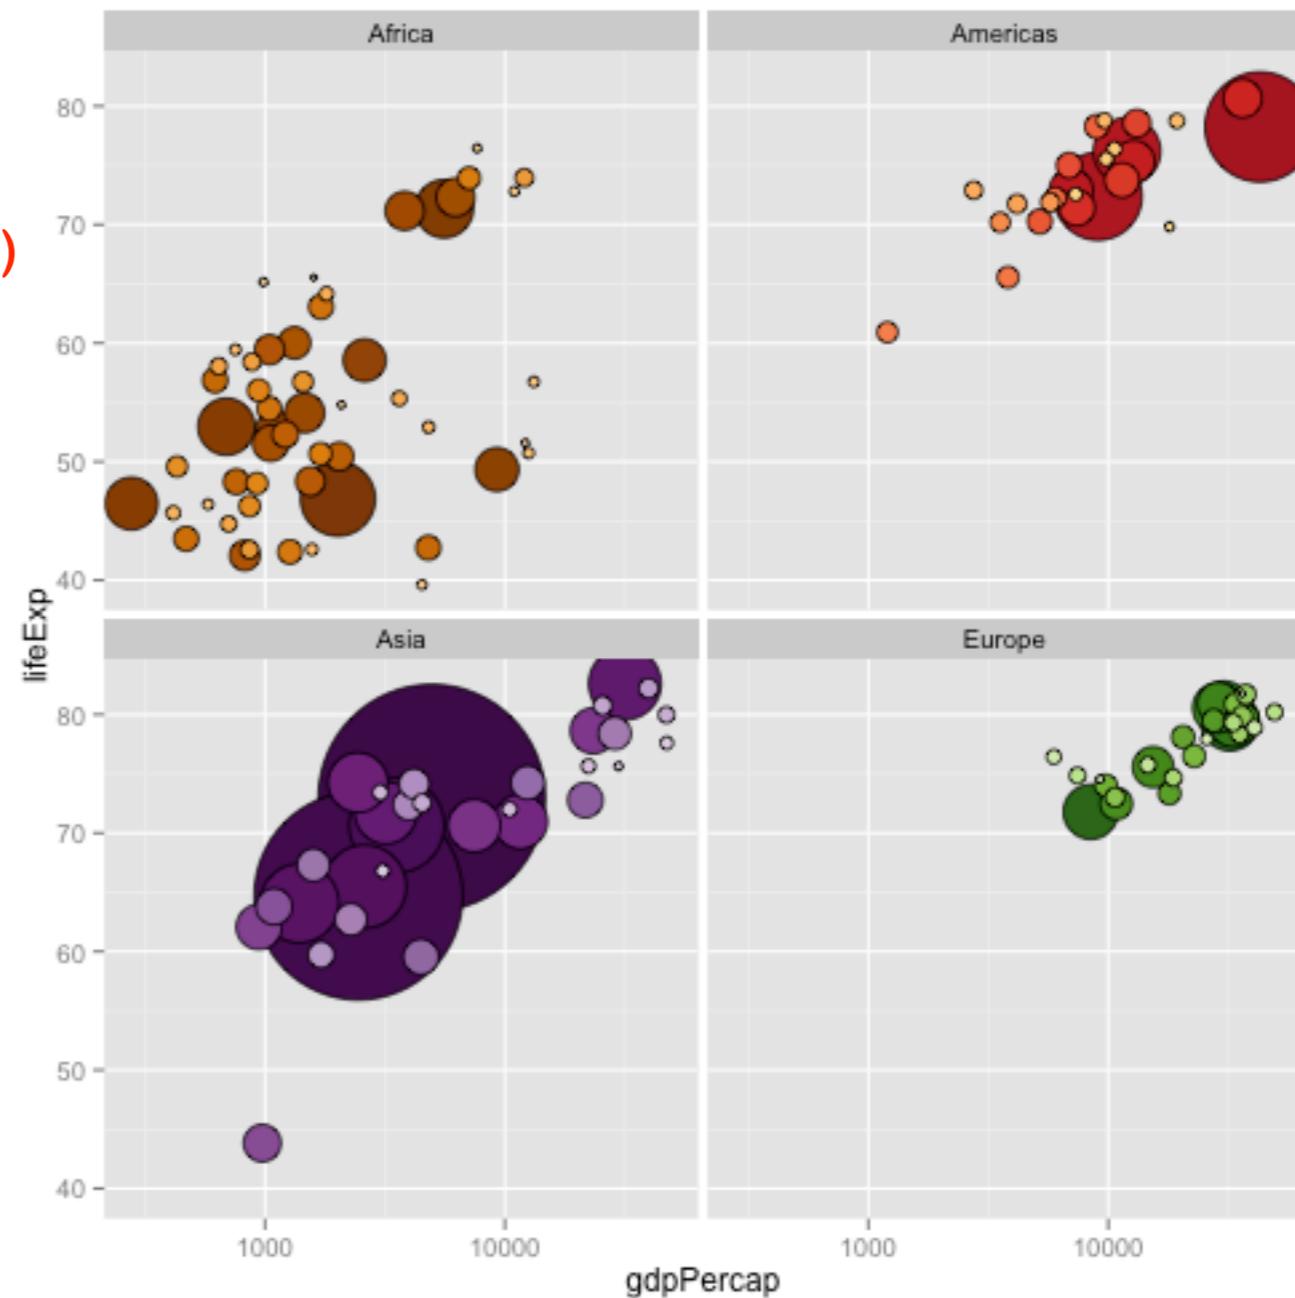

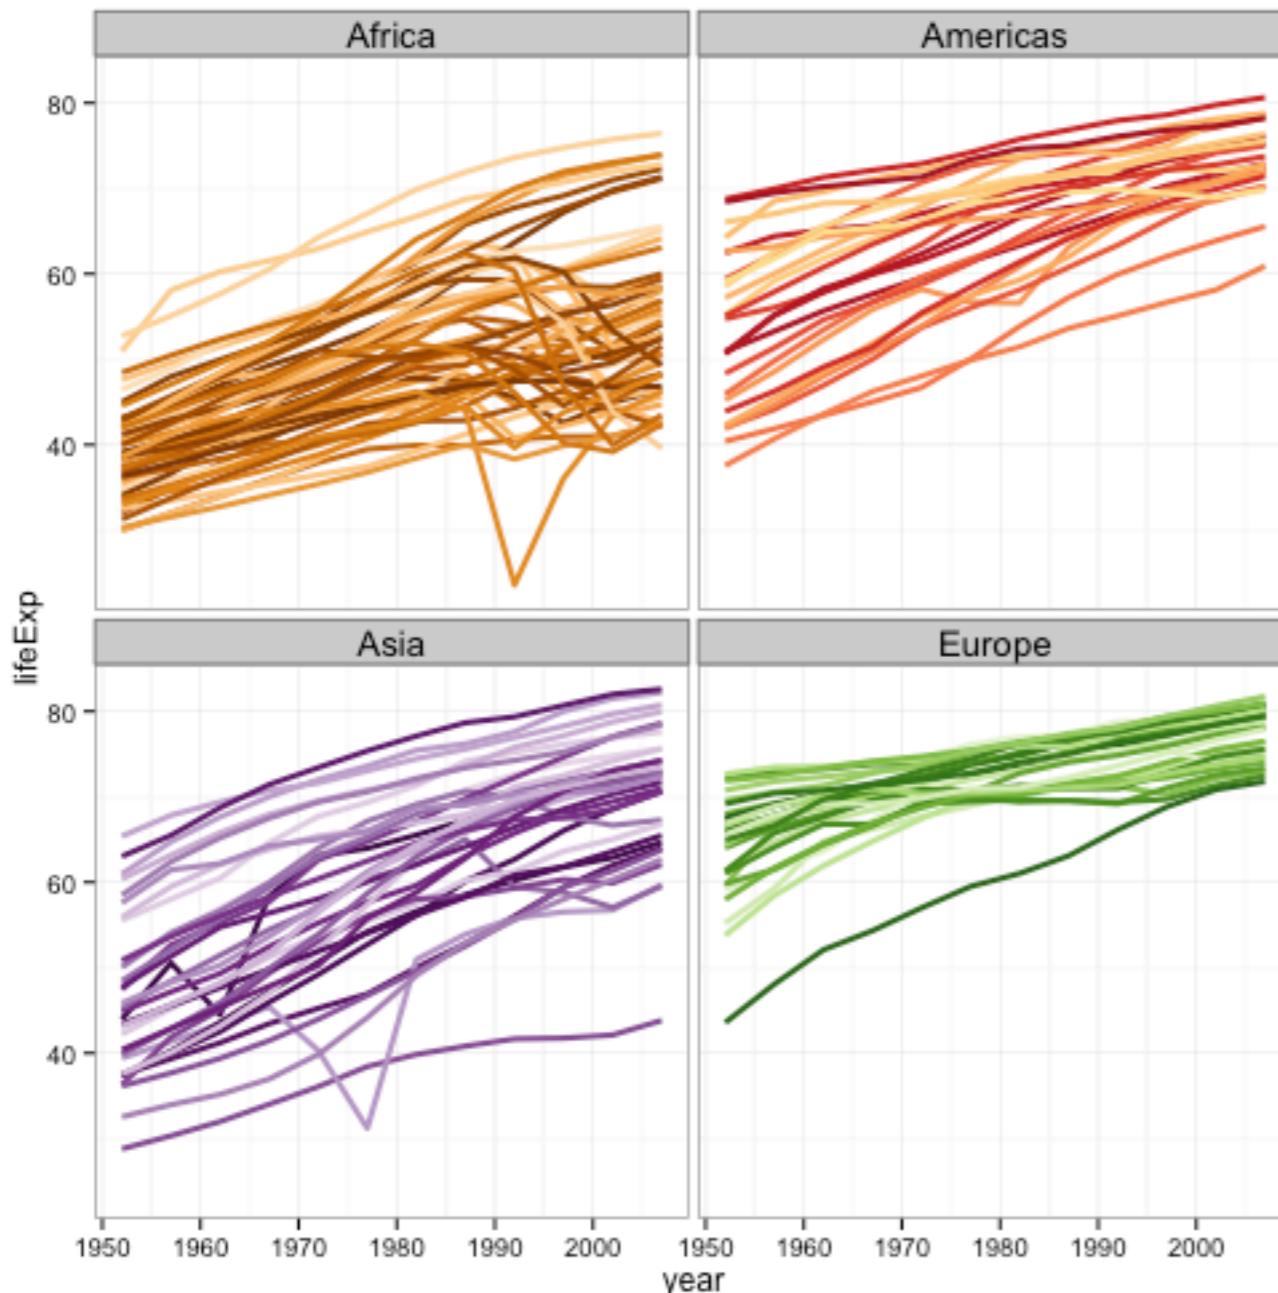

“groups and superposition”

`lifeExp ~ gdpPerCap | year, group = country`

ggplot2

“aesthetic mapping”

```
ggplot(...) + ... +  
aes(fill = country)
```

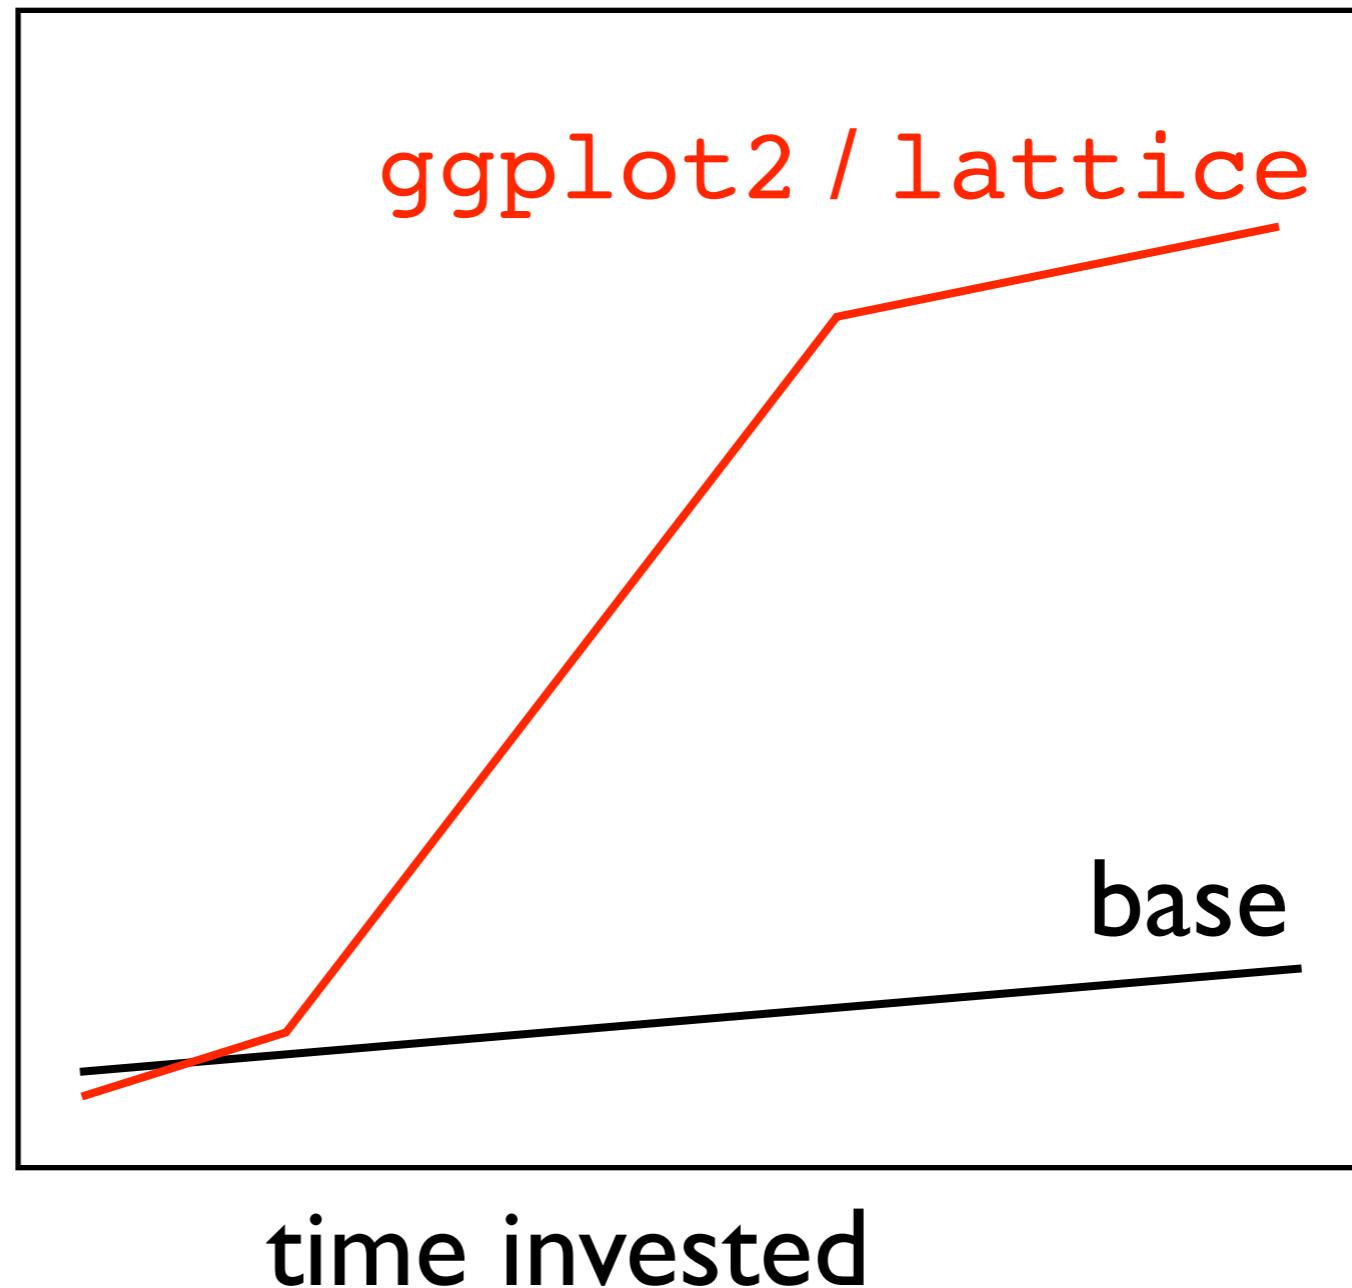

TO DO:

add similar eye candy for overlaying, e.g. a smooth fit

week one

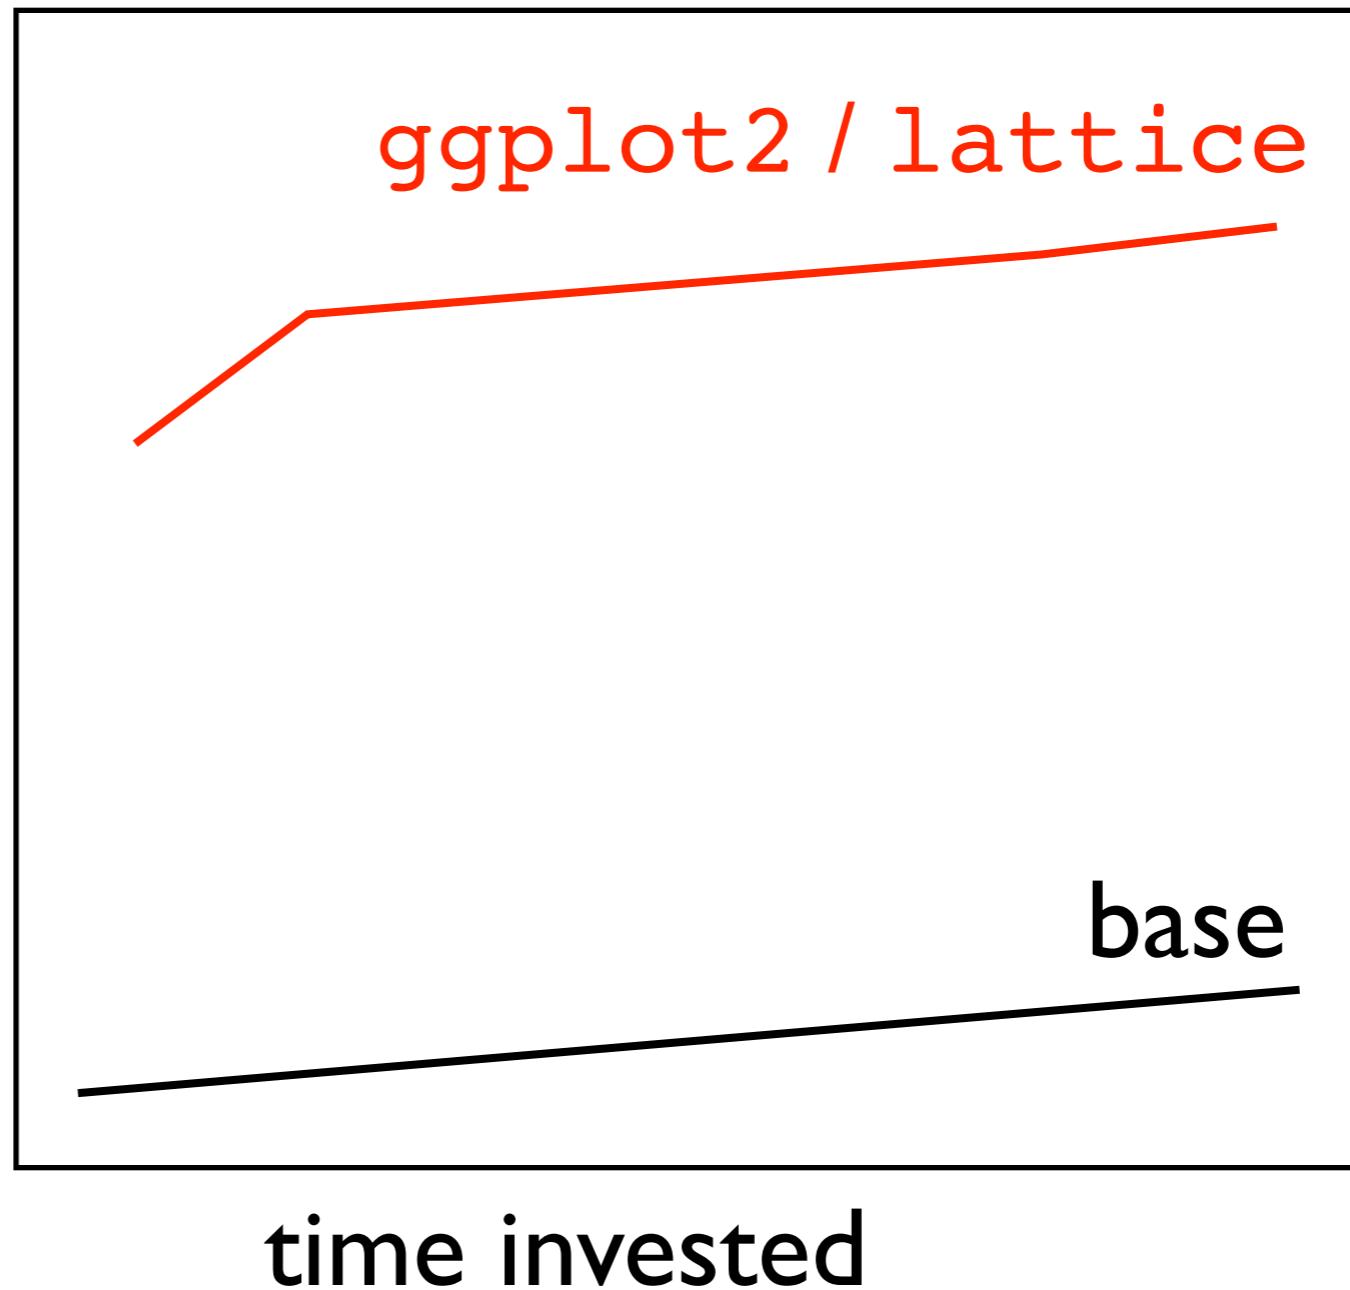

quality of
output

* figure is totally fabricated but, I claim, still true

after you've climbed the steepest part of the learning curve ...

quality of output

* figure is totally fabricated but, I claim, still true

use data.frames

use factors

be the boss of your factors

keep your data tidy

reshape your data

master `read.table()`

```
read.table(file, header = FALSE, sep = "", quote = "\'\'",
          dec = ".", row.names, col.names,
          as.is = !stringsAsFactors,
          na.strings = "NA", colClasses = NA, nrows = -1,
          skip = 0, check.names = TRUE, fill = !blank.lines.skip,
          strip.white = FALSE, blank.lines.skip = TRUE,
          comment.char = "#",
          allowEscapes = FALSE, flush = FALSE,
          stringsAsFactors = default.stringsAsFactors(),
          fileEncoding = "", encoding = "unknown", text, skipNul = FALSE)
```

master reorder()

reorder.default {stats}

R Documentation

Reorder Levels of a Factor

Description

`reorder` is a generic function. The "default" method treats its first argument as a categorical variable, and reorders its levels based on the values of a second variable, usually numeric.

Usage

```
reorder(x, ...)

## Default S3 method:
reorder(x, X, FUN = mean, ....,
       order = is.ordered(x))
```

In **tidy** data:

1. Each variable forms a column.
2. Each observation forms a row.
3. Each type of observational unit forms a table.

messy

	treatmenta	treatmentb

B	Z	2

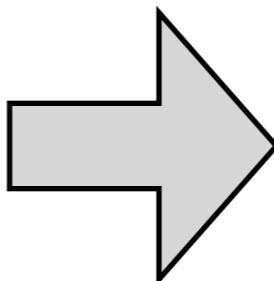

reshape your data

data has a tendency to get shorter and wider, but tall and thin often better for analysis + visualization

melt

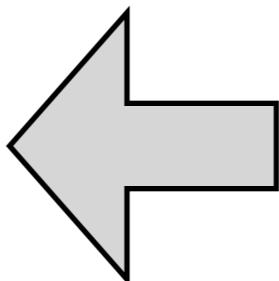

row	a	b	c
a	1	4	7
b	2	5	8
c	3	6	9

row	column	value
a	a	1
b	a	2
c	a	3
a	b	4
b	b	5
c	b	6
a	c	7
b	c	8
c	c	9

cast

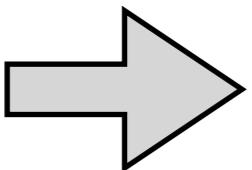

row	a	b	c
a	1	4	7
b	2	5	8
c	3	6	9

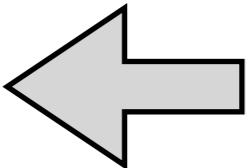

row	column	value
a	a	1
b	a	2
c	a	3
a	b	4
b	b	5
c	b	6
a	c	7
b	c	8
c	c	9

row	a	b	c
a	1	4	7
b	2	5	8
c	3	6	9

melt

row	column	value
a	a	1
b	a	2
c	a	3
a	b	4
b	b	5
c	b	6
a	c	7
b	c	8
c	c	9

cast

typical usage pattern:

melt to facilitate analysis and visualization

cast to make compact tables that are nicer for eyeballs

in addition to:

reshape2

see also:

plyr

dplyr

ggplot2

we will not use qplot() function

no training wheels

you're here ...

I assume you want to ride this bike

data, in `data.frame` form

aesthetic: map variables into properties people can perceive visually ... position, color, line type?

geom: specifics of what people see ... points? lines?

scale: map data values into “computer” values

stat: summarization/transformation of data

facet: juxtapose related mini-plots of data subsets

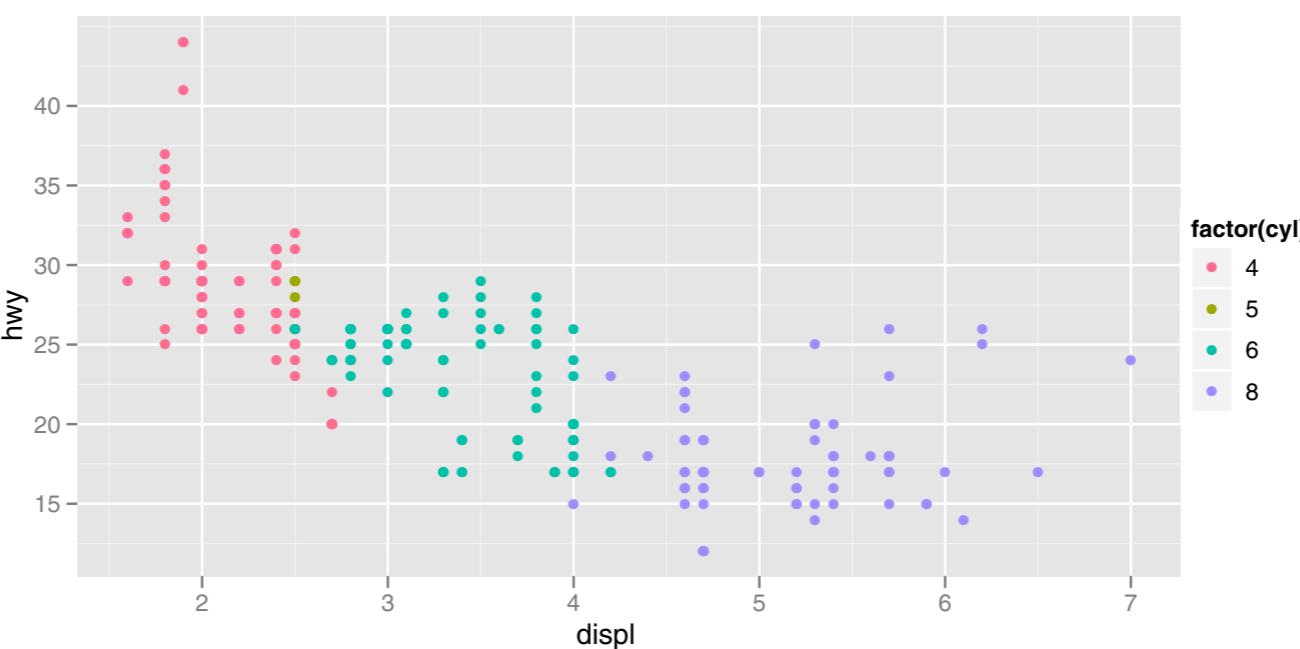

Fig. 3.1: A scatterplot of engine displacement in litres (displ) vs. average highway miles per gallon (hwy). Points are coloured according to number of cylinders. This plot summarises the most important factor governing fuel economy: engine size.

manufacturer	model	disp	year	cyl	cty	hwy	class

0.037	0.406	#FF6C91	1	19
0.074	0.500	#FF6C91	1	19

mapping data
to aesthetics

scaling:
data units →
“computer” units

base graphics cause a figure to exist as a “side effect”

ggplot2 (and lattice) construct the figure as an R object

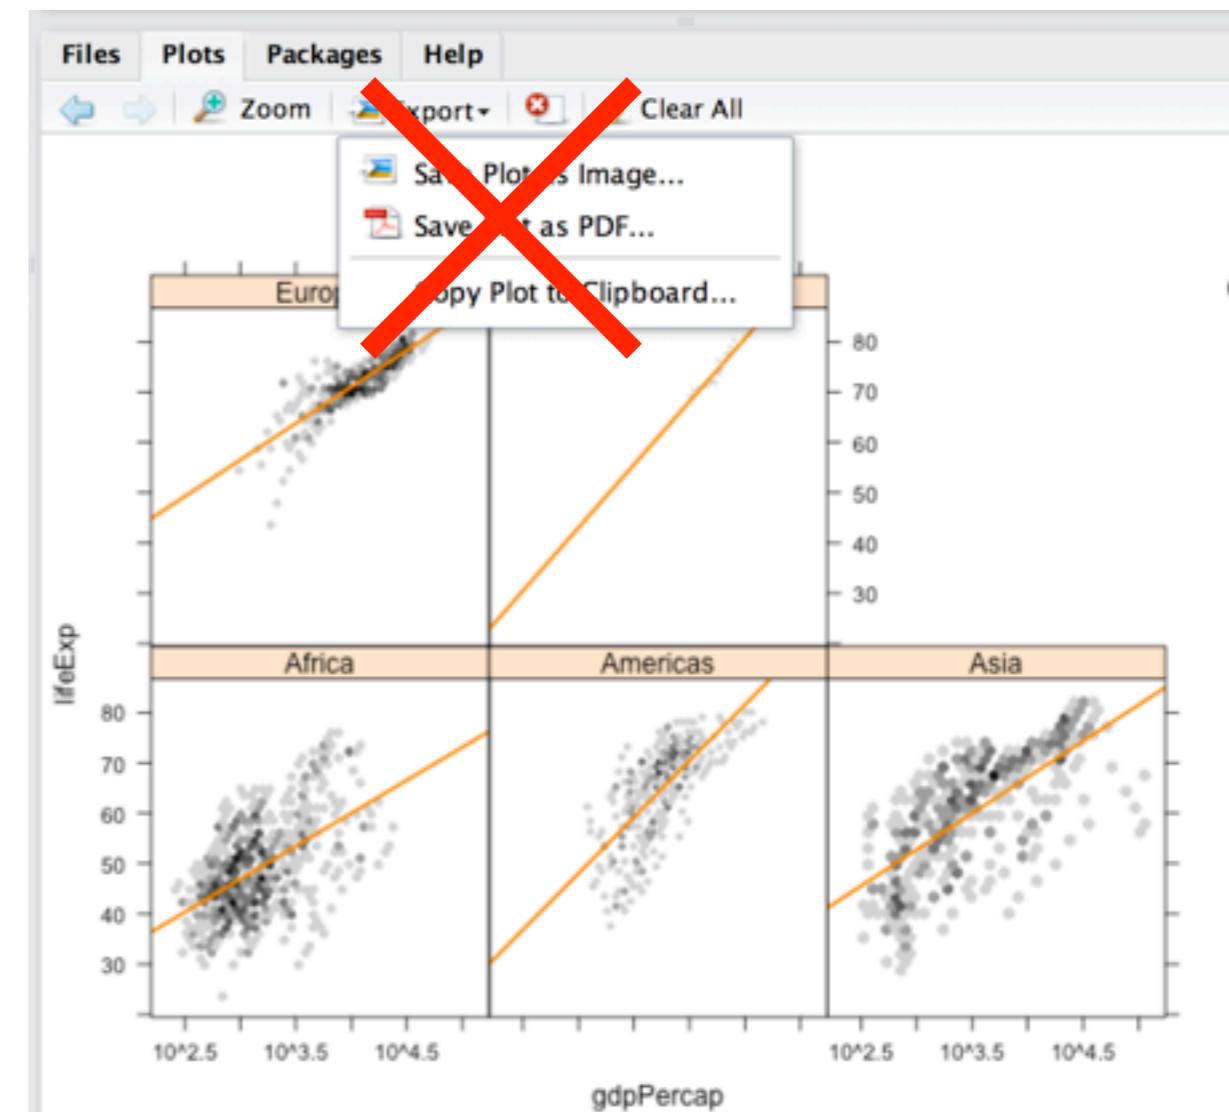

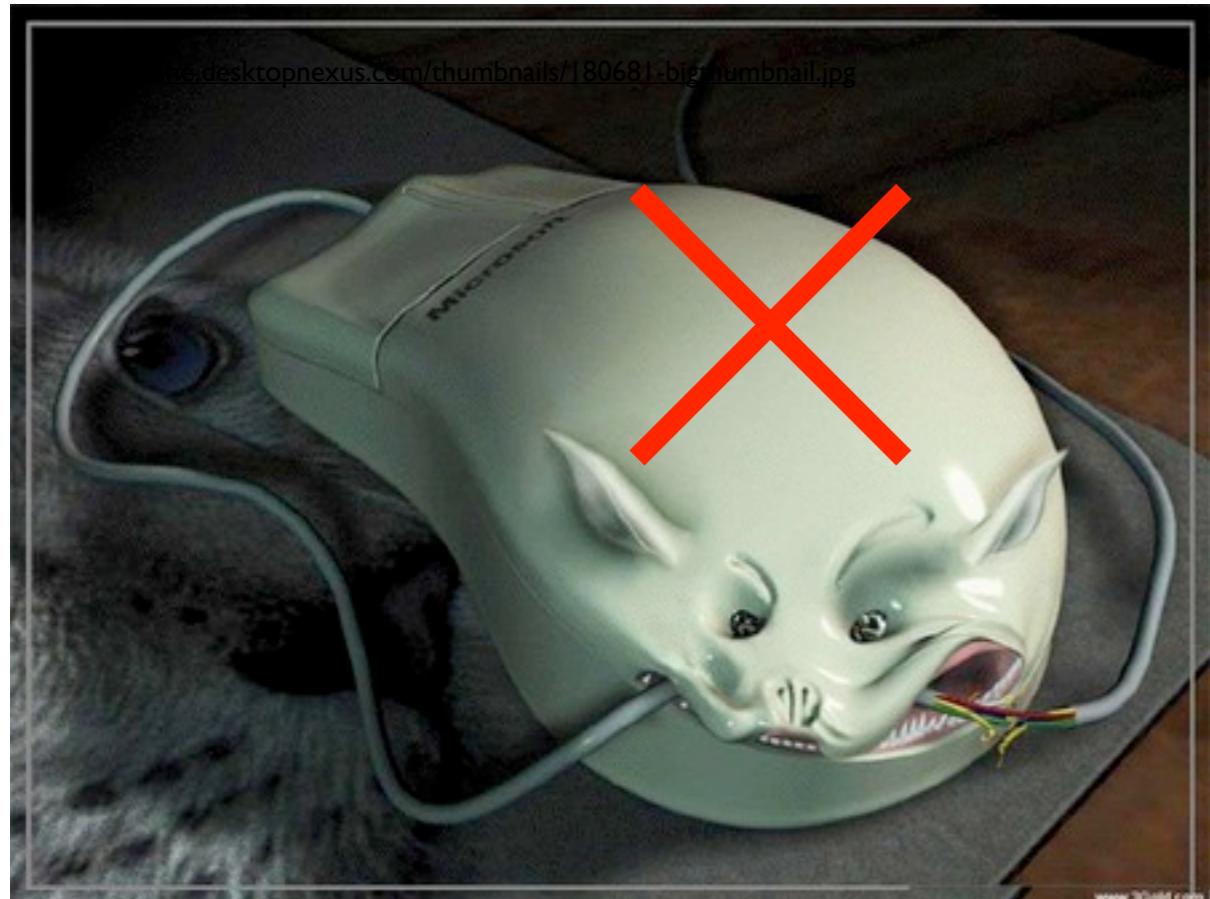

obviously you'll need to print it to see it

*this tutorial consisted largely of live
coding ... see the repo for indicative content*

<https://github.com/jennybc/ggplot2-tutorial>

saving figures to file

do not save figures mouse-y style
not self-documenting
not reproducible

most correct method:

```
pdf("awesome_figure.pdf")
plot(1:10)
dev.off()

postscript(), svg(), png(), tiff(), ...
```

fine for everyday use:

```
plot(1:10)
dev.print(pdf, "awesome_figure.pdf")  
  
postscript(), svg(), png(), tiff(), ...
```

next slide from here:

Data Visualization with R & ggplot2

Karthik Ram

September 2, 2013

- If the plot is on your screen

```
ggsave("~/path/to/figure/filename.png")
```

- If your plot is assigned to an object

```
ggsave(plot1, file = "~/path/to/figure/filename.png")
```

- Specify a size

```
ggsave(file = "/path/to/figure/filename.png", width = 6,  
height = 4)
```

- or any format (pdf, png, eps, svg, jpg)

```
ggsave(file = "/path/to/figure/filename.eps")  
ggsave(file = "/path/to/figure/filename.jpg")  
ggsave(file = "/path/to/figure/filename.pdf")
```

TO DO:

add wisdom helpers Nick and Casey shared
re: `ggsave()` usage patterns

TLDR

use the `ggsave(plot1, "filename.pdf")` form in scripts

the ‘scale’ argument is extremely useful for getting same fig in forms suitable for a talk and poster with little pain/time
